### **DETAILED ACTION**

1. This action is in response to the application filed 02/25/2000.
2. Claims 1-18 have been examined and are pending in the application.

### ***Claim Objections***

3. Claims 5 and 14 are objected to because of the following informalities: they should be read, "...includes one or more..." Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Biliris U.S Patent No. 5,590,327.

As to claim 1, Biliris teaches a run-time environment (determined at run time, line 16 column 4), accessing a definition of an object in terms of a composition of a primitive type (C++ definition, lines 30-50, column 4); accessing a platform-specific description of layout parameters ([MAX], line 32 column 4) of the primitive type; generating a layout for the object in a high-order language (C++ compiler to generate code that will invoke the appropriate function, lines 61-63 column 1).

As to claim 2, Biliris further discloses an accessor accessing a slot in the object holding a value for one primitive type (vtbl pointers to access entries in the virtual function table, line 9-10 column 9).

As to claim 3, Biliris further discloses fetching a value for one primitive type (39 to 32, Fig. 3).

As to claim 4, Biliris further discloses storing a value for one primitive type (32 to 3, Fig. 3).

As to claim 5, Biliris further discloses the primitive type includes reference (pointers, Fig. 3).

As to claim 6, Biliris further discloses the primitive reference type is a native machine pointer type (memory pointers, lines 13-31 column 2).

As to claim 7, Biliris further discloses the layout parameters include a size and an alignment of the primitive type (lines 11-15 column 11).

As to claim 8, note the discussion of claim 1 above. Biliris further discloses the platform-specific descriptions corresponding to the incompatible platforms (Fig. 3).

As to claim 9, Biliris further discloses the slots are located in the layouts for the incompatible platforms at same offsets (lines 52-59 column 6 and lines 17-30 column 7).

As to claims 10-18, note the discussions of claims 1-9 above, respectively.
